

## PRIMARY PROCESS 100

### 102 Sorting and Washing

Whole skin on potatoes are sized and washed.

### 104 Pretreating

Whole skin on potatoes are pretreated for ca. 30 min at 140 F in water in the presence of either 200 ppm chlorine or 2-3% oxiperiacetic acid

### 106 Cutting

Pretreated potatoes are cut into various sizes

### 110 Sugar Drag

Blanched potato strips are passed briefly through a 160 F sugar drag or flume in the presence of Dextrose, SAPP, Salt, Sulfite.

### 108 Blanching

Potato strips are blanched at 165-170 F for ca. 14-20 min in the presence of antimicrobials

### 112 Drying

Potato strips are dried to obtain a weight loss of 10-15%

### 114 Battering

Potato pieces are battered in a batter mixed to ca. 38% solids, with 11-13% pickup.

### 116 Par-Frying

Potato strips are par-fried for ca. 80-100 sec at 390-395 F to obtain a finished frozen targets of 38% total solids 6% fat 1% salt

### 118 Freezing & Bulk Storage

Par-fried product is frozen (<24F) and stored in bulk totes frozen until secondary processing & packaging

Figure 1.

## SECONDARY PROCESS 200

300  
Clean Room  
Environment

202  
Singulation

Frozen bulk product is dumped and singulated onto conveyor belt

206  
Freezing

Pasteurized product is passed through a freezing process (conventional or cryogenic) to re-freeze the product to <20F.

204

Impingement Oven

Frozen product is passed through an impingement oven into a clean room environment process to pasteurize the outer surface to a temperature of 170-290 F (ca. 30-60 sec)

208

Weighing & Packing

Frozen, pasteurized product is aligned, weighed, and packed into pre-formed plastic trays (ca. 1 lb).

210

MAP Packaged

In-tray product is evacuated and flushed with a gas mixture of oxygen, carbon dioxide, and nitrogen and lidding stock is applied and containers are sealed

212

Packing

Sealed product is passed out of the clean room environment for labeling, casing, and palletizing.

214

Frozen Storage

Packaged product is held frozen until shippment.
